1. INTRODUCTION

Mental wellness is an important part of a healthy lifestyle. Many students and individuals experience stress and anxiety in their daily lives. MindSpace is developed to promote positivity, motivation and emotional awareness through a simple web-based platform.

The application allows users to:

- Track their moods
- Read motivational quotes
- Explore wellness and self-care tips
- Navigate between pages without reloading

The project is developed using React.js and demonstrates modern frontend development techniques.

2. OBJECTIVES

- To develop a simple mental wellness application
- To implement React.js concepts practically
- To create a responsive and aesthetic UI
- To demonstrate Routing and State Management
- To provide users with motivational and wellness content

3. TECHNOLOGIES USED

Category	Technologies / Tools	Purpose
Frontend Framework	React.js	Used to build interactive user interface
Programming Language	JavaScript	Used for application logic and functionality
Markup Language	HTML5	Used to structure web pages
Styling Language	CSS3	Used for designing and styling the application
Build Tool	Vite	Used for fast React project setup and development
Routing Library	React Router DOM	Used for navigation between pages
State Management	useState Hook	Used to manage dynamic data and user interaction
Development Environment	VS Code	Used for writing and managing code
Package Manager	npm	Used to install project dependencies
Runtime Environment	Node.js	Used to run the React development server

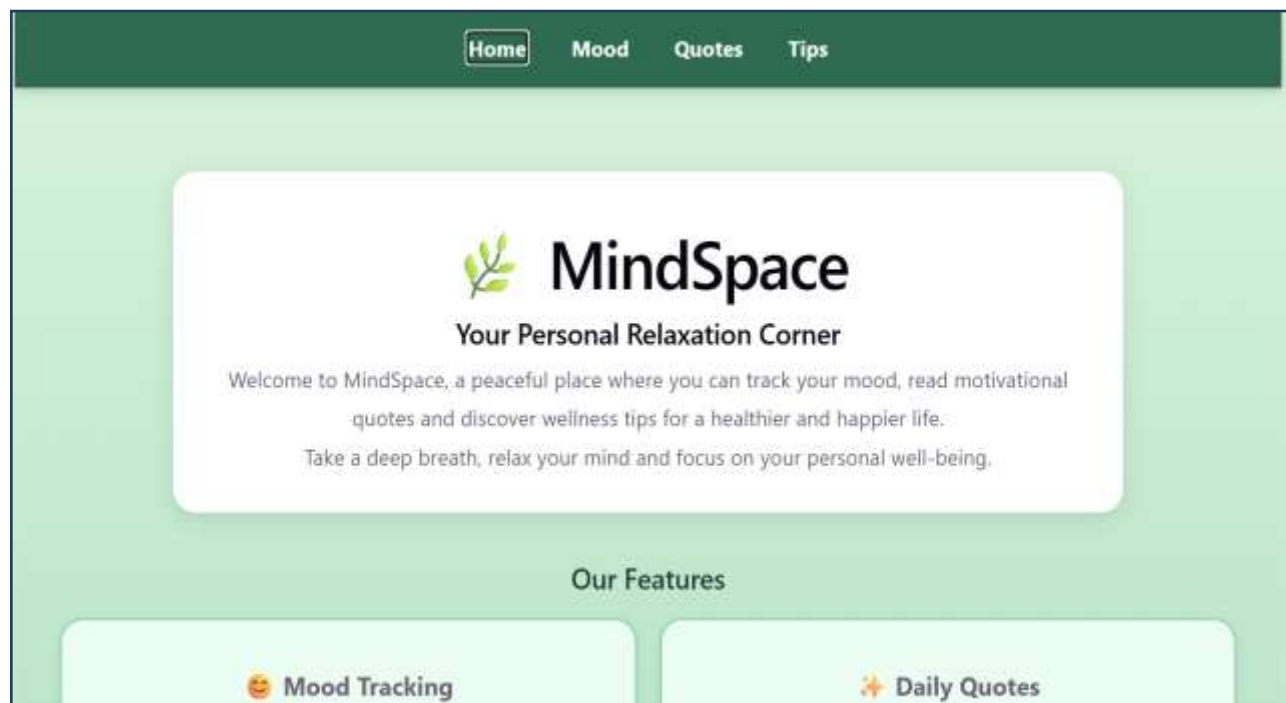

4. SYSTEM FEATURES

- Home Page
- Mood Tracker
- Motivational Quotes
- Mood-Based Quotes
- Wellness Tips
- Navigation Bar
- Responsive Layout
- Interactive UI

5. MODULES DESCRIPTION

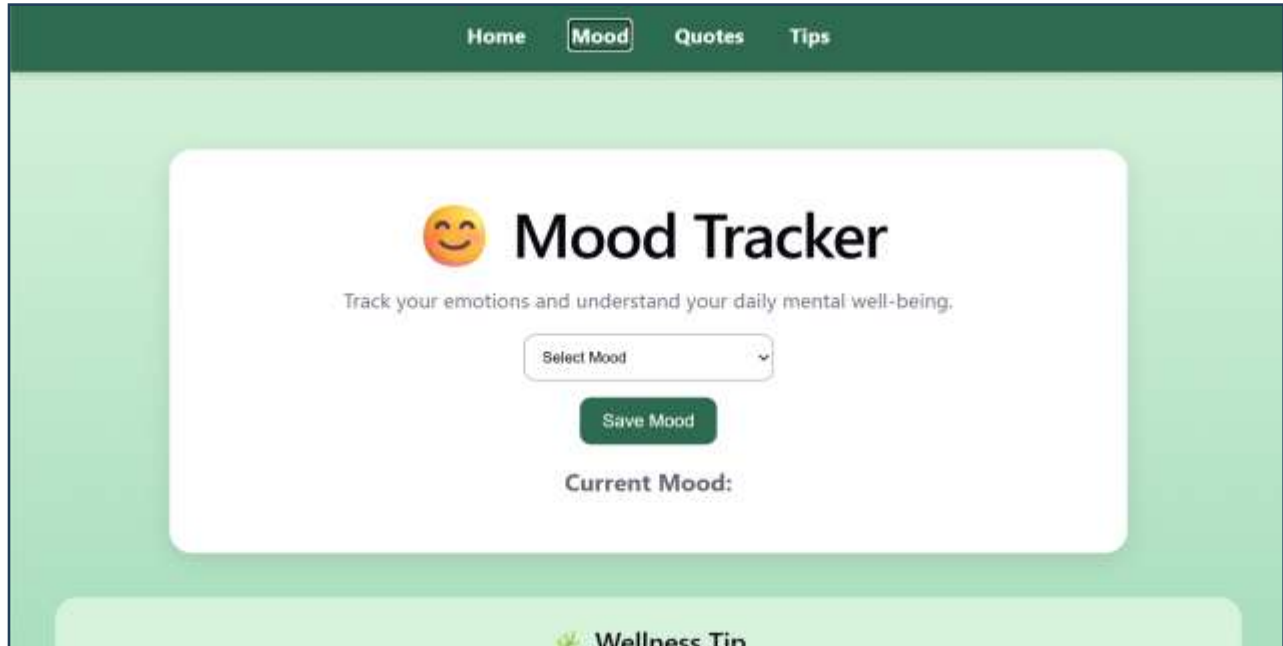

5.1. Home Module

The Home page provides an introduction to the MindSpace application. It displays the project features, wellness reminders and information about the application.

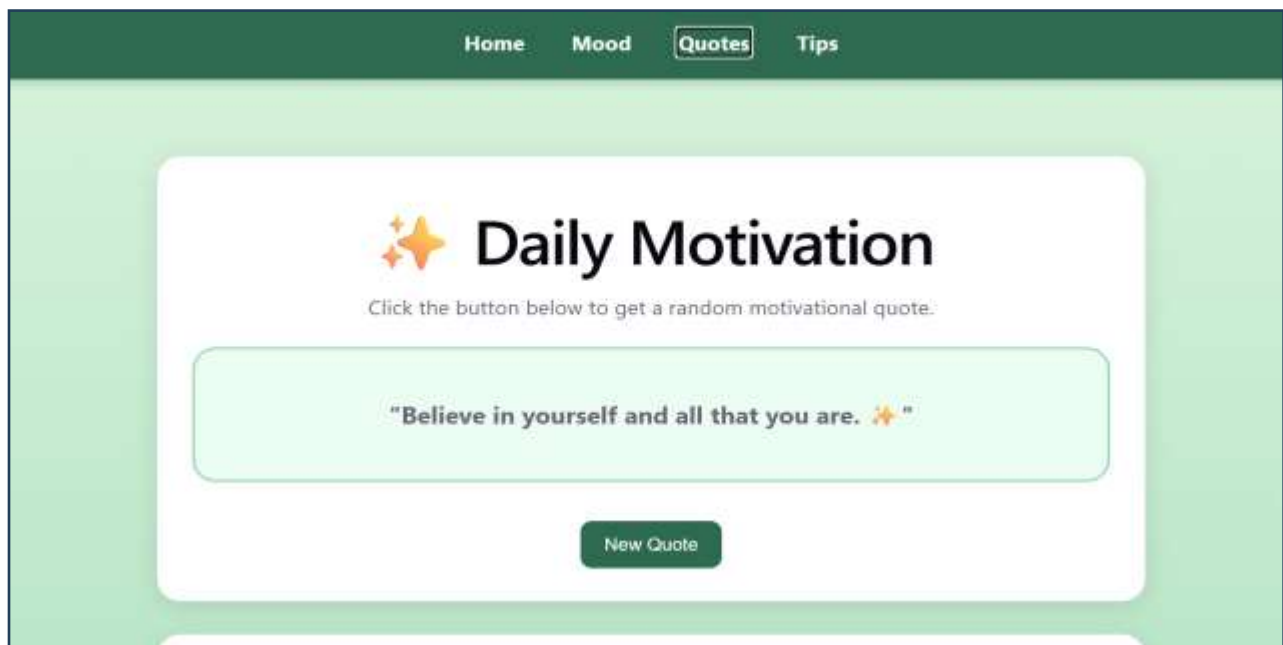

5.2. Mood Tracker Module

The Mood Tracker module allows users to select and save their mood. The selected mood is displayed instantly and stored in a mood history list using React state management.

5.3. Quotes Module

The Quotes module generates random motivational quotes. It also provides mood-based quotes for Happy, Sad, Stressed and Motivated moods.

5.4. Wellness Tips Module

The Wellness Tips module provides self-care and wellness suggestions including hydration, sleep, meditation and healthy routines.

6. REACT CONCEPTS USED

Components

The application is divided into reusable components such as Home, MoodTracker, Quotes and Tips.

useState Hook

useState is used for managing moods, quotes and user interactions.

Routing

React Router is used for navigation between pages without reloading the website.

Lists and Keys

The map() function and unique keys are used to display dynamic lists such as mood history.

Event Handling

Button clicks and form interactions are handled using React events.

Conditional Rendering

Conditional rendering is used to display messages dynamically.

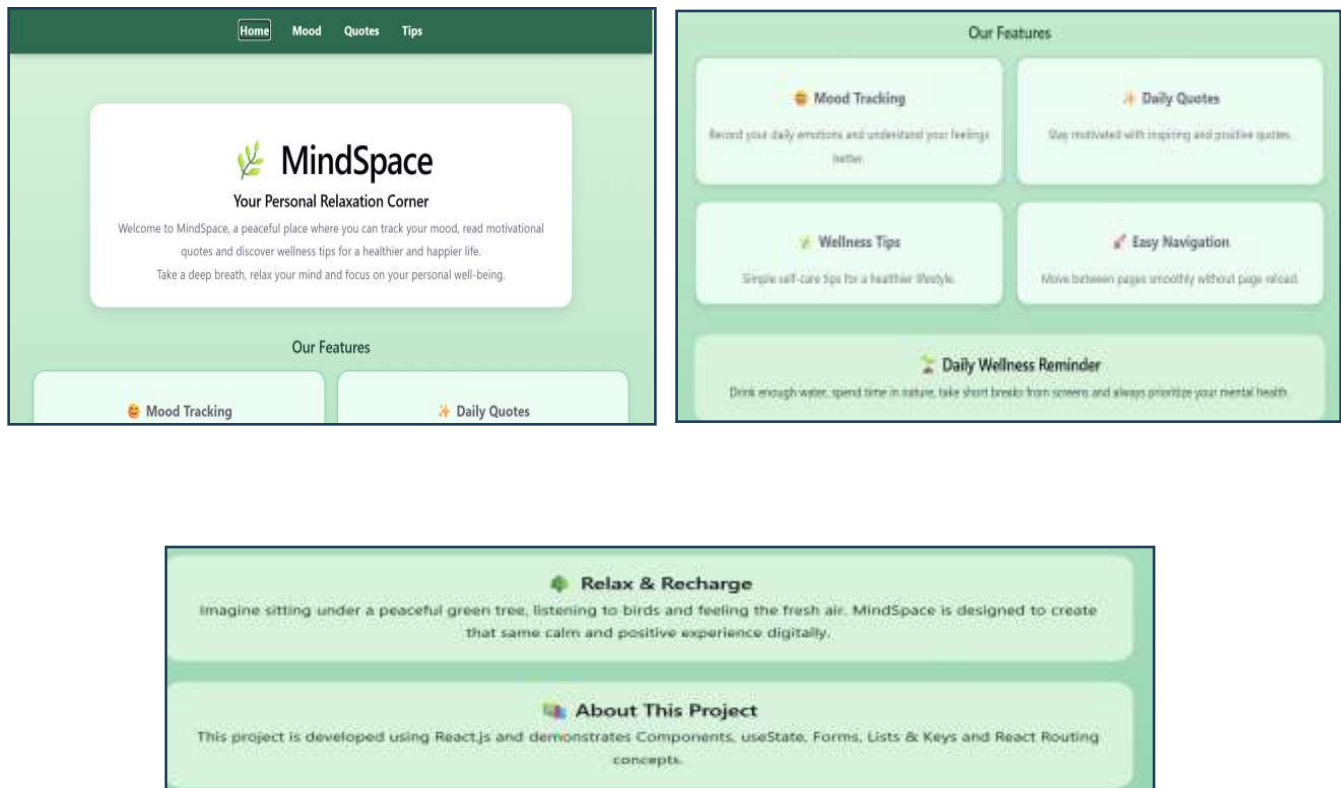

7. PROJECT WORKING

The application starts from the Home page. Users can navigate using the Navbar to different sections of the website. The Mood Tracker allows users to save moods dynamically. The Quotes page generates random motivational quotes, while the Tips page displays wellness suggestions.

All pages are connected through React Router and update dynamically without page refresh.

8. SCREENSHOTS SECTION

8.1. Home Page

8.2. Mood Tracker Page

[Home](#) [Mood](#) [Quotes](#) [Tips](#)

Mood Tracker

Track your emotions and understand your daily mental well-being.

Tired 😴

Save Mood

Current Mood: Tired

 **Wellness Tip**

Writing down your mood every day can improve self-awareness and emotional understanding.

 **Mood History**

1. Happy
2. Tired

8.3. Quotes Page

[Home](#) [Mood](#) [Quotes](#) [Tips](#)

Daily Motivation

Click the button below to get a random motivational quote.

"Believe in yourself and all that you are. ✨"

New Quote

 **Mood Based Quotes**

 **Happy Mood**

Smile more, worry less.

New Quote

 **Sad Mood**

This feeling will pass.

New Quote

 **Stressed Mood**

Take a deep breath.

New Quote

 **Motivated Mood**

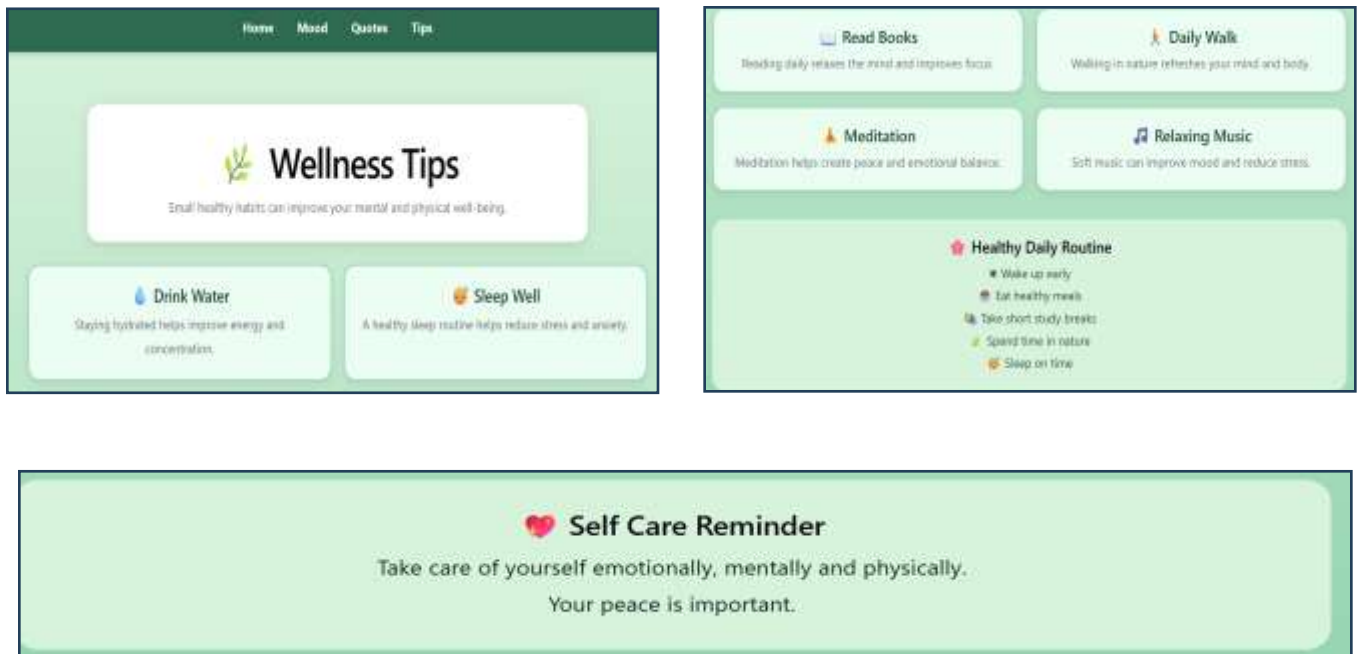

Dream big.

New Quote

 **Positive Thinking**

Positive thoughts help reduce stress, improve mental well-being and create a happier lifestyle.
Every small positive step today can make a big difference tomorrow.

8.4. Wellness Tips Page

8.5. VS Code Project Structure

9. ADVANTAGES

- Simple and user-friendly interface
- Fast navigation using React Router
- Interactive and dynamic UI
- Easy to understand for beginners
- Promotes positivity and wellness

10. FUTURE ENHANCEMENTS

- User Authentication
- Database Integration
- Dark Mode
- Mood Analytics
- Daily Notifications
- API Integration

11. Conclusion

MindSpace is a simple and interactive React.js web application designed to promote mental wellness and positivity. The project successfully demonstrates important frontend development concepts including Components, Routing, State Management and Dynamic Rendering.

The application provides a modern and aesthetic user experience while helping users stay motivated and emotionally aware. This project improved practical understanding of React.js and modern web application development.
